Note: Dimensions subject to change without notice.

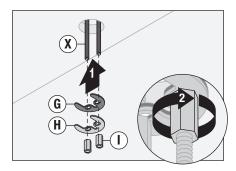

1a) **SLS-3612:** Insert faucet body (E) through deck surface.

1b) **SLS-3622:** Insert faucet body (E) through deck plate (Z) and deck surface.

 Slide mounting gasket (G) and metal washer (H) on to fasteners (X). Secure with mounting nuts (I).

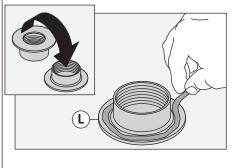

Note: Hoses removed for clarity.

 Install teflon tape to inlets of shut-off valves. Attach supply lines to shut-off valves and hand tighten. Using a wrench, finish with onehalf turn. **DO NOT** overtighten.

4) Apply plumber putty to underside of flange (L).

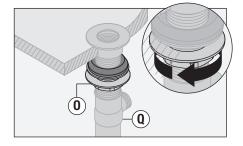

5) Insert flange (L) into drain opening. From below, attach drain body (Q) with gasket (M) and washer (N) to flange (2-3 turns until hand tight).

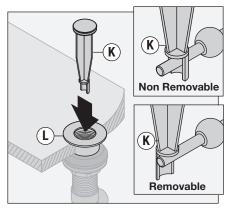

Note: Make sure drain cavity (on drain body) faces rear of sink.

 From below, tighten flange nut (O) to secure drain body (Q).
 DO NOT overtighten.

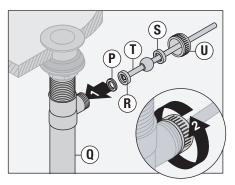

Note: Make sure flange is centered in drain opening.

7) Insert stopper (K) into flange (L) and rotate to proper position.

Note: Stopper can be installed removable or non-removable determined by eye hole position.

 Insert pivot rod (T) into drain body (Q) against gasket (P) and inner seat (R). Install outer seat (S) against pivot ball and secure assembly by tightening retaining nut (U).

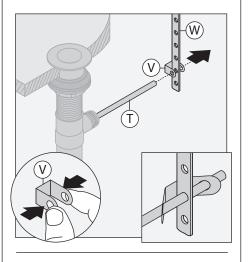

Note: Pivot rod passes under stopper.

Installation

 Insert lift rod (J) into back of faucet body (E). From below, attach clevis strap (W) to lift rod (J). Tighten thumb screw to secure.

 With stopper in closed location, insert pivot rod (T) into clevis strap (W). Secure with spring clip (V).

- 11) To adjust stopper, select another hole in clevis strap or loosen thumb screw to slightly raise or lower lift rod.
- 12) Attach drain body to drain trap.

13) The handle limit stop can be set to limit handle turn to the hot position. To measure temperature, turn handle to full hot position and lift handle half way open. If water is too hot or cold, loosen set screw and remove handle. Remove limit stop ring and rotate counter clockwise to lower temperature or clockwise to raise temperature.

Care and Cleaning

1) Clean finished trim area with a soft cloth using mild soap and water or a non-abrasive cleaner and then quickly rinse with water.

Troubleshooting Chart

Problem	Cause	Solution
Finish is spotting.	Elements in water supply may cause water staining on finish.	Clean finished trim area with a soft cloth using mild soap and water or a non-abrasive cleaner and then quickly rinse with water.
Faucet is leaking from handle or faucet body.	Cartridge o-rings are worn or foreign matter (dirt, chips) is lodged between cartridge and o-rings.	Remove cartridge and inspect for foreign matter. Replace cartridge if necessary.
Faucet no longer maintains desired temperature.	Hard water deposits inside of cartridge is preventing accurate mix of hot and cold water.	Soak cartridge in white vinegar for 1 hour to breakdown hard water deposits, then rinse with water. Replace cartridge if necessary.

WARNING: This product can expose you to chemicals including lead, which is known to the state of California to cause cancer, birth defects, or other reproductive harm. For more information, go to www.P65Warnings.ca.gov.
