

Temptrol®

Balanced Precision!

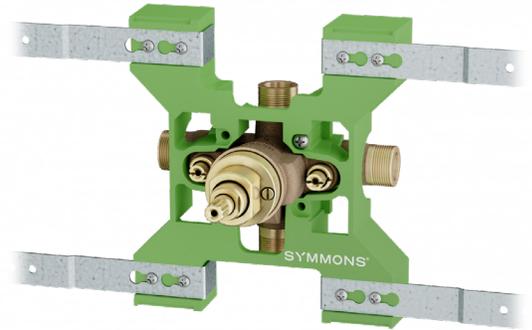

The safety of pressure-balanced protection with the durability of brass

Built on 80 years of innovation, the **Symmons Temptrol** has been the benchmark for anti-scald, pressure-balancing shower valves since 1968. The solid brass and bronze TA-10 flow control spindle provides scald protection by automatically balancing the hot and cold water pressure to accommodate for building water pressure fluctuation.

Temptrol valves are ASSE 1016 certified and are listed down to 1.0 GPM to comply with regulations for 1.2 GPM showerheads. The control spindle provides 360-degree rotation for full temperature control, and the brass cap assembly features a temperature limit stop that's easy to set without shutting down the water system.

Temptrol valves are designed with all ports on a common plane and integrated stringer mounts, and they can be modified for back-to-back installations by simply installing optional reverse seats.

Other options include factory-installed fittings for virtually any piping material found in the field today, such as copper sweat, CPVC, IPS, PEX, and ProPress®. **The Temptrol Rapid Install™ Bracket** is available for easier and more accurate mounting.

TEMPROL HAS THE METTLE, AND THE METAL!

Valve body and spindle are made from dezincification-resistant semi-red brass and bronze, with a stainless-steel piston and housing that instantly balances fluctuating water pressure.

SIMPLE TO REPAIR AND RENEW!

Simple repair with a genuine Symmons TA-10 spindle takes less than 5 minutes and automatically resets and renews the warranty—a full 10 years for commercial and lifetime for residential!

MADE IN OUR MASSACHUSETTS FACTORY

All Temptrol valves are machined right in-house with our state-of-the-art CNC machining to exact tolerances for consistent, reliable operation, year after year.
